

## Route Delivery Module

The FlexiBake Route Delivery Module is recommended for any business that may be having problems managing their daily deliveries, or who are perhaps wanting to expand or start doing deliveries but are concerned about the logistics.

**1** Deliver the correct products on time each day.

To obtain repeat orders from your customers on a regular basis you must deliver the correct products, on time, every day. Remove the mistakes caused by misplaced orders taken down on pieces of paper and from spreadsheets not being updated.

**2** Save time

Printing the Delivery Slips and Truck Loading Slip for each delivery route can be done with a few clicks of the mouse.

**3** Improve staff morale.

Use this module to implement a system of control and order and eliminate the chaos and stress that often manifests when people are placed under pressure to deliver on time.

**4** Correct Invoices

In the event of product shortages, you can easily and quickly adjust the quantities on each Delivery Slip and reprint before the deliveries commence. The returned Delivery Slips must also be quickly checked and any returns or shortages entered before the invoices are generated.
