

Sales Orders and Delivery Slips Module

Are you looking to add an excellent order taking system to your business? Do you need to minimise the number of incorrect sales orders which result in unhappy customers, returned products and lost repeat sales? Would you like to build a solid sales history that you can analyse, to be able to determine for example which are your most and least profitable customers?

1 Efficient and quick order taking

With the easy to use interface, order taking is quick and efficient. Select the customer from the dropdown list, enter the required ship date and the products ordered. To add a product to the order you can enter either the product code or name. You can display the complete product list by clicking the F2 button or you can choose to display only those products the customer has previously ordered by pressing the F3 button. The F3 option is useful when taking orders in a high pressure, noisy environment, where it is sometimes difficult to hear or understand the person placing the order.

2 Customise your Sales Orders

You can insert your company logo and customise your address details. You can also add a note that will be printed on the Sales Order as well as a note intended for internal use only that does not appear on the printed Sales Order.

3 Standing Sales Orders

Encourage your regular repeat business customers to setup standing orders. You can create morning and afternoon standing orders for each customer. Standing Sales Orders not only save you time but enable you to better plan your production and staffing requirements.

4 Customer Database

A customer database is a key component of any business. Keeping contact with customers is a good way to get repeat business and promote new products to the right people. A good customer database also forms part of the Goodwill of a business when it is sold and should therefore not be neglected.

AFCOM
26985 116th Avenue
Maple Ridge, BC
